```swift
import Foundation
func displayAnyData<T>(data: T) {
    print("Generic functions")
    print("data sent: ", data)
}

displayAnyData(data: "Swift")
displayAnyData(data: 5.28)
displayAnyData(data: true)
displayAnyData(data: -2589.324)

class sixthSem<T> {
    var data: T
    init(data: T) {
        self.data = data
    }

    func passData() -> T {
        return self.data
    }
}

var object1 = sixthSem<Int>(data: 67)
print("Generic class will return: ", object1.passData())

var object2 = sixthSem<String>(data: "welcome")
print("Generic class will return: ", object2.passData())
```
